

# Program registration

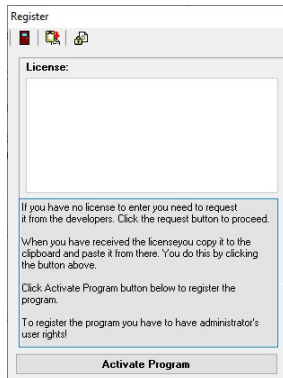

All of the programs require registration before they can be used. Licenses are computer and partly user specific. Each computer requires own dedicated license per program. License is locked to the computer identification collected during the licensing procedure, see below. Because the licensing information is saved into the Registry under Current User key the license has to be entered for every user where the computer is used by multiple users having different user names.

Registration is two step process. The first step is to request a license. Second step is to enter it after the license is received.

Terms License, Key and Certificate mean the same thing.

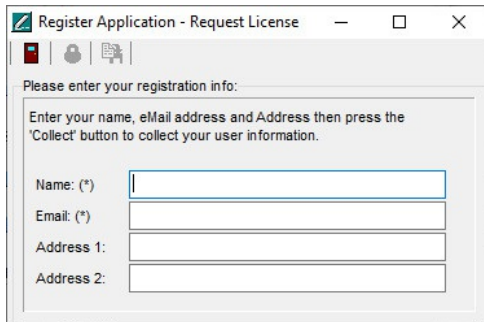

## License Request

Steps to follow to request the license:

**Figure 1** Registration

1. Install program on the computer you are going to use for testing or for the permanent installation. We recommend you use the standard installation and default file locations.
2. Start the program.
3. New form opens. This is for the registration. If the form doesn't open each program has either a registration button or a menu entry in Help Menu.
4. Click the last button on top with a hint "Request for license"
5. New form opens
6. Enter requested information
7. Click the second button "Collect information" (Middle button)
8. Click the last button "Copy to clipboard" (Last button on right)

**Figure 2** Registration data entry

9. Open your e mail program and start a message to us

10. Paste the clipboard content into the e mail. The result looks something like the following:

-----Do not change the following-----

Jouko Tolonen jouko@jatsa.biz

PinMaster 1.0.0.0

41940

1057-4E4B-5E3C-9DA0-7F93-C26B-D383-30F8

-----End of request----- Comments to developers:

To paste you can use the program's Paste Menu selection or press and hold ctrl key and press letter "v" key.

12. Send the e mail to developers

If the computer you are using has no E mail possibility then you can use Notepad program to transfer the license request to another computer. Notepad is part of each Windows operating system and makes simple text files \*.txt. Save the file onto a disk for the transfer.

If you are installing multiple programs on the same computer, you do not need to issue the request for all of them. Simply create one request and in the e mail list the programs for which you require the license. Series II programs have the same system between all of them but the remainder have different licensing system and require separate request.

There are two license types. One type is Site License type. This means that the programs can be installed on multiple computers within one company. However, license has to be requested separately from each of the computers. License issued for one computer will not work on another. Second type is where licenses are purchased with specific number of licenses. Licensing process is identical between the two types.

## Entering the License

After receiving the license, which is sent via e mail in \*.txt file format it has to be entered to the program the license is for. License file name identifies for which program the license is for. License file for PinMaster II is named PinMaster\_II\_License.txt. Depending on the Windows settings you may not see the file name part ".txt". As a default it is hidden by the operating system. This is a serious security issue and you should always change the setting to prevent unintended installation of dangerous viruses and malware.

To enter the license start the program. If the licensing form doesn't open automatically simply click the button or menu item to open the entry form. After the license entry form is open follow the steps:

1. Copy the license from the first to the last character as describe below using copy command or key combination CTRL plus key C. Typical license file looks like:

Key:

```
*begin_data*FT45RY6J-ZOWLYTDF-GDM4Q6CP-4K72QIYS-IMG6ITUX-VLAIBDJ  
3-CAAON7P2-4ICE72WH-AMO6CFPL-KCJWABQA-7H4PPOYF-NAHQB44H-BR4P  
BAID-AQEGFEYG-B5DJWQOH-NAGTALIC-CR5AC7H3-36G6QH7X-AQG2J35U-N  
BI3C3J5-54BBKAEY-G4VAMRJV-XHP3D2EW-PXNWIJAB-AHBXMHIP*end_dat  
a*
```

2. Click second button from left on the registration form, see [Figure 1](#). This has a hint "Load license from clipboard"

3. Click button Activate Program (Long button at the bottom of the form)

4. Read all messages. You should get information that the program is registered. If you receive an error message write it down (each error) or preferably take an image and send them to us.

Entry may fail due to misunderstanding, company security policies or by some other reason. All cases have been solved.
